(1/1) installing chrome-remote-desktop [#####] 100%

Set up CRD by issuing the command:

`crd --setup`

as a normal user.

After that, enable access to CRD in your chrome or chromium browser.

To {enable,start} the service, issue the command:

`systemctl --user {enable,start} chrome-remote-desktop`

This only really makes sense for servers.

You can also start the chrome remote desktop server by issuing the command:

`crd --start`

as a normal user.

This will prompt you to set up your CRD if it hasn't been set up already.

Go to <https://support.google.com/chrome/answer/1649523> for more information.
